Preface	iii
I Linear Algebra Concepts and Matrix Decompositions	1
1 Vectors and Matrices in Data Mining and Pattern Recognition	1
1.1 Data Mining and Pattern Recognition	1
1.2 Vectors and Matrices	2
1.3 Purpose of the Book	5
1.4 Programming Environments	6
1.5 Floating Point Computations	6
1.6 Notation and Conventions	9
2 Vectors and Matrices	11
2.1 Matrix-Vector Multiplication	11
2.2 Matrix-Matrix Multiplication	13
2.3 Scalar Product and Vector Norms	15
2.4 Matrix Norms	16
2.5 Linear Independence – Bases	17
2.6 The Rank of a Matrix	18
3 Linear Systems and Least Squares	21
3.1 LU Decomposition	21
3.2 Symmetric, Positive Definite Matrices	23
3.3 Perturbation Theory and Condition Number	24
3.4 Rounding Errors in Gaussian Elimination	25
3.5 Banded Matrices	26
3.6 The Least Squares Problem	28
4 Orthogonality	35
4.1 Orthogonal Vectors and Matrices	36
4.2 Elementary Orthogonal Matrices	38
4.3 Number of Floating Point Operations	43
4.4 Orthogonal Transformations in Floating Point Arithmetic	44

5	QR Decomposition	45
5.1	Orthogonal Transformation to Triangular Form	45
5.2	Solving the Least Squares Problem	49
5.3	Computing or Not Computing Q	50
5.4	Flop Count for QR Factorization	51
5.5	Error in the Solution of the Least Squares Problem	51
5.6	Updating the Solution of a Least Squares Problem	52
6	Singular Value Decomposition	55
6.1	The Decomposition	55
6.2	Fundamental Subspaces	59
6.3	Matrix Approximation	61
6.4	Principal Component Analysis	64
6.5	Solving Least Squares Problems	65
6.6	Condition Number and Perturbation Theory for the Least Squares Problem	67
6.7	Rank-Deficient and Under-Determined Systems	68
6.8	Computing the SVD	70
6.9	Complete Orthogonal Decomposition	70
7	Reduced Rank Least Squares Models	73
7.1	Truncated SVD: Principal Components Regression	75
7.2	A Krylov Subspace Method	78
8	Tensor Decomposition	89
8.1	Introduction	89
8.2	Basic Tensor Concepts	90
8.3	A Tensor Singular Value Decomposition	92
8.4	Approximating a Tensor by HOSVD	94
9	Clustering and Non-Negative Matrix Factorization	99
9.1	The k -Means Algorithm	100
9.2	Non-Negative Matrix Factorization	104
II	Data Mining Applications	109
10	Classification of Handwritten Digits	111
10.1	Handwritten Digits and a Simple Algorithm	111
10.2	Classification using SVD Bases	113
10.3	Tangent Distance	118
11	Text Mining	127
11.1	Preprocessing the Documents and Queries	128
11.2	The Vector Space Model	129
11.3	Latent Semantic Indexing	132
11.4	Clustering	137

Contents	vii
<hr/>	
11.5 Non-Negative Matrix Factorization	138
11.6 Lanczos-Golub-Kahan Bidiagonalization	140
11.7 Average Performance	143
12 Page Ranking for a Web Search Engine	145
12.1 Pagerank	145
12.2 Random Walk and Markov Chains	148
12.3 The Power Method for Pagerank Computation	152
12.4 HITS	157
13 Automatic Key Word and Key Sentence Extraction	159
13.1 Saliency Score	159
13.2 Key Sentence Extraction from a Rank- k Approximation	163
14 Face Recognition Using Tensor SVD	167
14.1 Tensor Representation	167
14.2 Face Recognition	170
14.3 Face Recognition with HOSVD Compression	173
III Computing the Matrix Decompositions	175
15 Computing Eigenvalues and Singular Values	177
15.1 Perturbation Theory	178
15.2 The Power Method and Inverse Iteration	183
15.3 Similarity Reduction to Tridiagonal Form	185
15.4 The QR Algorithm for a Symmetric Tridiagonal Matrix	187
15.5 Computing the SVD	194
15.6 The Non-Symmetric Eigenvalue Problem	195
15.7 Sparse Matrices	197
15.8 The Arnoldi and Lanczos Methods	198
15.9 Software	205
Bibliography	207
Index	215
